Mark Whale, violin
David Holler, tenor
Cecile Desrosiers, piano

GENERAL ADMISSION
\$15 (STUDENTS \$10)

To reserve tickets, go to
<http://mimm.mcmaster.ca>
or call 905-525-9140 ext. 27114

Tickets also available at the
door

In association with the
American Synesthesia
Association

Music is not only heard, but experienced through seeing, touching and movement. Dr. Steven Brown is one of the world's experts on the neuroscience of the arts. His brain imaging studies have elucidated the nature of singing, dancing, and speaking in the brain. He will tell us about how the brain processes aesthetic experience. Dr. Daphne Maurer's studies of perceptual development in infants and children are world renowned. Here she will explain how colour becomes linked to music, especially in some people with synesthesia —people like composers Messiaen, Liszt, Sibelius, and Rimsky-Korsakoff, who literally saw colours when they heard music.
